

Project Key Facts

Product: PU4223CS
Aggregate: SBR / EPDM
Area: 75m²
Date: September 2014

New Housing Development Play Area

A seaside theme was chosen for this play area in a new housing development. The planners made it a priority that facilities for children were included in a safe space when plans were submitted for approval. The graphics of the seaside animals and compass that were incorporated were specially designed to the customer's specification and were made prior to installation. During the installation process they were laid in place and the main rubber crumb layer is installed around them. The installation companies can customise the graphics to any design including company or school logos, playground games (e.g. hopscotch) or characters.
