

Project Key Facts

Product: LeesonBound UVR PU4844

Aggregate: Cottage Gold Blend

Area: 295m²

Date: Spring 2024

Bridge Court, Brigg

A new development of apartments were constructed on the site of a former cycle factory in Brigg, North Lincolnshire. The project specified the installation of resin bound for the pathways and courtyard for its durable properties and attractive finish. Using the aggregate blend of Cottage Gold, the resin bound was laid to a depth of 20mm for 295 metres square. The installer, Jointline, overcame a number of challenges in order to complete the project on time. Inclement weather and some residents having already moved in meant adapting schedules and planning to minimise disruption. The result is a smart, safe and sustainable surface, expertly installed to a very high standard.
