

Project Key Facts

Product: LeesonBound PU4844

Aggregate: Natural Red

Area: 741m²

Date: 2023

Aylestone Recreation Ground

Improvements to the cycle and pedestrian route through Aylestone Recreation Ground were undertaken by Leicester City Council in partnership with resin bound installers Jointline. The specification was to create a SUDS* compliant surface in a Natural Red blend of aggregate at 40mm thick. The Jointline team were hampered by bad weather conditions but pulled out all the stops to ensure that the project was finished on time and the site could be reopened. The upgrade to the recreation ground provides walkers, cyclists, wheelchairs and buggies a safe, clean and traffic free route through the grounds making it an enjoyable experience for local people.

*Sustainable Urban Drainage System
