

Project Key Facts

Product: LeesonBound Non-UV

Aggregate: Terracotta

Area: 120m²

Date: November 2014

Terracotta Drive

This domestic drive incorporated a turning circle and the owners were concerned to have a product that didn't move or break up with the turning of the car tyres. They were advised to install a suitable base for the load that it expected to carry once the resin system was applied. Base surfaces with fewer joints provide the best finish, such as tarmac or concrete. A resin bound system is only as strong as its weakest component. To be SUDS compliant, a resin bound system needs to be placed on to a suitable permeable base. The owners were pleased to have LeesonBound installed to keep a long-lasting smooth finish on the surface.
